

## Participation of BalticGrid-II project members in EGEE User Forum 2010 in Uppsala

BalticGrid-II project was present at EGEE User Forum in Uppsala, Sweden, on 12-15 April 2010.

Participants of the event and visitors of the exhibition area had an opportunity to find more information on the Project and talk to BG-II representatives by visiting the BG-II stand.

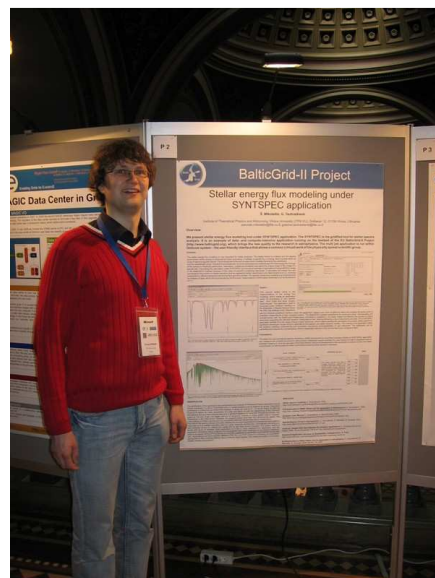

The general Project stand at the conference exhibition was managed by Robert Pajak (IFJ PAN) with help of other BG-II representatives from RTU and ITPA VU. The following materials were presented at the stand: posters (a general one, on BalticGrid Innovation Lab, on BG-II applications and on E-learning course in Grid Computing), the set of technical brochures (including the new ones: “BalticGrid Innovation Lab – BGi”, „Grid Visualization Tool VisPartDEM” and “E-learning course in Grid Computing”), pens, pen drives, as well as the BG-II movie introducing the

Project objectives, partners and several applications grid enabled in the framework of the Project. This version of the movie included two new parts: on the eLearning course developed within the Project and on the BGi initiative, started in the framework of the BG-II project.

The BG-II poster concerning one of the Project applications, titled "Stellar energy flux modeling under SYNTSPEX application", was presented in the framework of the poster session during the event by Sarunas Mikolaitis (ITPA VU).

The presence of the BalticGrid-II project at such a big and important event increased well its visibility among other Grid projects and national initiatives.
